MPowered eXPerience in Ultrasound estate

MyWork MyPatient MySystem MyLab

MyLab™Eight platform is the culmination of Esaote's dedicated R&D with the aim of meeting the increasing demands of modern healthcare:

- Outstanding image quality
- Confident diagnosis for difficult to scan patients
- Complete solution for the most demanding clinical activity
- Advanced research tools

Outstanding image quality

WideView 21.5" IPS Monitor

Broad Connectivity Options

Esaote puts a great deal of effort into designing systems that offer top image quality to enable confident diagnoses for difficult-to-scan patients, as well as highly detailed superficial image resolution. This has been achieved over the years through advanced research, with several patents and publications, and effective implementation in both systems and probes.

Outstanding diagnostic value is the result of optimization of all the aspects of the signal chain, from the echo generated by the patient through to the display on the system, together with maximization of ultrasound scanning efficiency.

The new WideView monitor technology offers sharp diagnostic image clarity with enhanced spatial and contrast resolution.

Content of the second secon

MyLab™Eight platform incorporates the new @MPowered Engine to optimize high-density and single-crystal transducers to enable images to be captured at greater depth in the body with unprecedented quality for difficultto-scan patients.

Wireless and wired connectivity options offer numerous data-saving and transmission options. All our systems are equipped with wired and wireless connectivity for easy networking and patient management.

Extensive connectivity technology

- Easy networking
- DICOM and IHE compliance
- MyLab[™]Desk software for comfortable image review and reporting on your laptop or PC

Large probe portfolio

During real-time scanning the ultrasound probe is a continuously handled interface for the operator, which can lead to hand stress and fatigue.

Our solution:

Enhanced ergonomics probe solution

- Lightweight and with appleprobe ergonomics
- Reduce muscle strength up to 70%
- Increased confidence

Single-crystal transducers enable images to be captured at greater depth in the body with unprecedented quality for difficult-to-scan patients.

High Density Linear probes offer high frequency top image quality and unparalled spatial and contrast resolution.

Virtual Navigator

Advanced tool for Multimodality Real-time Fusion Imaging.

QElaXto

Shear Wave Tissue Stiffness Quantitative Assessment (MyLab™Eight eXP).

3D eWave

Shear Wave Quality Graph for immediate feedback about measurement quality (MyLab™Eight eXP).

MyLab™Remote

Remote system user interface app that allows MyLab™Eight to be controlled via smartphone or tablet.

Flow

XFlow

Extraordinary flow sensitivity and spatial resolution: XFlow provides direct visualization of blood echoes, extending wideband resolution, high frame rates and wide dynamic range of blood flow.

ElaXto

Full Strain Elastosonography package for multiple applications. Full measurement package, available on many probe typologies.

BodyMap

2D Navigation technology on second imaging modality, Body mark and patient examined area picture.

Virtual Biopsy

Advanced Biopsy also in very difficult approaches: Virtual Biopsy allows physicians to follow percutaneous procedures by superimposing needle tracking information on the real-time ultrasound image.

CnTI™ Contrast Tuned Imaging

Esaote's proprietary CnTI™ provides high performance contrast enhanced ultrasound imaging with second generation contrast media.

XStrain

Speckle tracking for myocardial strain and strain rate assessment.

RFOIMT RFOAS

Intima-Media Thickness and Arterial Stiffness

measurements, based on beyond state of the

art RF-data technology, are real-time, accurate

and provide measurement quality indicators

overlaid on the B-mode ultrasound image.

XLight

A New Era in Volume Imaging: the new XLight technology guarantees to immediately achieve amazingly realistic volumetric images also with very difficult to scan patients, both for gynecology as well as obstetrics examinations.

AutoNT

Performs automatically the Nuchal Translucency measure by simply placing a measure box over the area of interest. AutoNT helps in obtaining faster, more reproducible and less operator dependent results for improved diagnostic confidence and maximized productivity.

microV

High sensitivity, high spatial resolution, high frame rate hemodynamic analysis for microvascularization in tissue perfusion. State of the art sensitivity for superficial and deeper vessels for improved spatial resolution in real-time hemodynamic analysis.

Advanced hemodynamic evaluation tools such as XFlow and HD CFM, quantitative tissue stiffness evaluation with QElaXto, and Virtual Navigator for easy-toperform real-time fusion imaging are just a few examples of Esaote's advanced technologies that are tailored to meet all requirements, including the most demanding.

Esaote's focus on the prevention of work-related musculoskeletal disorders runs through MyLab™Remote, the remote system user interface app that allows MyLab™Eight to be controlled via smartphone or tablet.

Virtual biopsy technology is a valuable tool for facilitating needle insertions for difficult biopsies and for percutaneous treatments.

Other highlights include toplevel Contrast Enhanced Ultrasound (CnTI™) and advanced cardiovascular tools, such as the XStrain cardiac deformation analysis tool and the radiofrequencybased Intima Media Thickness (QIMT) and Arterial Stiffness (QAS) measurement, underlining Esaote's trademark "Creativity in Healthcare".

Healthcare".

Radiology

Advanced diagnostic tools

- CnTI™ Full spectrum Contrast enhanced ultrasound
- ElaXto Full Strain Elastosonography package for multiple applications
- QElaXto Shear Wave Tissue Stiffness Quantitative Assessment (MyLab™Eight eXP)
- microV High sensitivity, spatial resolution hemodynamic analysis for micro-vascularization
- Virtual Biopsy Clear visualization of needle insertion and path
- Virtual Navigator State of the Art Real-time Multiple modality Fusion Imaging Technology

Large selection of probes

- C 1-8 Single Crystal convex array probes for Difficult-to-scan patients
- L 4-15 High Frequency Linear array probe for optimized spatial and contrast image resolution
- Linear array probes from 3 to 22 MHz
- **Biopsy dedicated Convex probe** with 0°, 5°, 15° needle insertion angle
- IH 6-18 High Frequency Hockey Stick probe
- TRT33 Transrectal Dual array and Endocavity probes
- Prostate Transperineal Biopsy and Treatment Stepper

MSK and Rheuma

Advanced diagnostic tools

- ElaXto Full Strain Elastosonography package for multiple applications
- **microV** High sensitivity, spatial resolution hemodynamic analysis for micro-vascularization
- Virtual Biopsy Clear visualization of needle insertion and path
- Virtual Navigator State of the Art Real-time Multiple modality Fusion Imaging Technology
- CnTI™ Full spectrum Contrast enhanced ultrasound

Large selection of probes

- L 4-15 High Frequency Linear array probe for optimized spatial and contrast image resolution
- Linear array probes from 3 to 22 MHz
- IH 6-18 High Frequency Hockey Stick probe

Cardiology and Vascular

Obstetrics and Gynaecology

Advanced diagnostic tools

- TVM Tissue Velocity Mapping
- CMM Compass M-Mode on multiple view lines
- **QIMT** Radiofrequency-based IMT for real-time assessment and top precision
- QAS Radiofrequency-based real-time Arterial stiffness measurement
- **Stress Echo** for cardiac function assessment during stress (prospective/retrospective/continuous capture)
- XStrain speckle tracking for myocardial strain and strain rate assessment
- LVO Left Ventricle opacification

Large selection of probes

- PA250 Single Crystal probe for defined images and high frame
- Phased array probes for Pediatric and Neonatal patients
- TEE probes for Adult and Pediatric patients
- Linear array probes from 3 to 22 MHz
- Microconvex array probe
- IH 6-18 High Frequency Hockey Stick probe
- **Doppler pencil probes** Low, Mid, High Frequency ad for TCD examination

Advanced diagnostic tools

- XLight Advanced volumetric rendering technique
- ElaXto Full Strain Elastosonography package for multiple applications
- AutoNT Automatic Nuchal Translucency measurement
- microV High sensitivity, spatial resolution hemodynamic analysis for micro-vascularization
- Virtual Biopsy Clear visualization of needle insertion and path
- Virtual Navigator State of the Art Real-time Multiple modality Fusion Imaging Technology

Interventional and Surgery

Large selection of probes

- C 1-8 Single Crystal convex array probes for Difficultto-scan patient
- Lightweight 3D Convex and Endocavity probes
- LA332 Low Frequency Linear array probe for optimized spatial image resolution
- **Biopsy dedicated Convex probe** with 0°, 5°, 15° needle insertion angle

Advanced Diagnostic tools

- Virtual Biopsy Clear visualization of needle insertion and path
- Virtual Navigator State of the Art Real-time Multiple modality Fusion Imaging Technology
- CnTI[™] Full spectrum Contrast enhanced ultrasound (available also during Fusion Imaging)
- ElaXto Full Strain Elastosonography package for multiple applications (also in Fusion Imaging)
- **QElaXto** Shear Wave Tissue Stiffness Quantitative Assessment available also during Fusion Imaging (MyLab™Eight eXP)

Large selection of probes

- C 1-8 Single Crystal convex array probes for Difficultto-scan patients
- **Biopsy dedicated Convex probe** with 0°, 5°, 15° needle insertion angle
- TRT33 Transrectal Dual array and Endocavity probes with Transperineal biopsy kit
- Linear, Convex, 3D Convex, Microconvex probes with Reusable and/or Disposable multi-angle biopsy kits
