SIMPLY SWISS

Basic – Surgical Suction Pump

Basic

The suction pump with Swiss ingenuity and simplicity

Providing reliable and simple suction, hygienically. The Basic pump is a reliable and simple suction pump available for all applications in the hospital, clinic or doctor's practice that require a high-vacuum setting, including endoscopy, airway suction, vacuum assisted cesarean/delivery and wound drainage.

Keeping it simple. In developing the Basic suction pump, Medela strived for simplicity. Turn the pump on with either the foot switch integrated into the trolley or by touching the button on the housing. Adjust the vacuum with the intuitive membrane vacuum regulator. Optional accessories can be attached to meet your needs. Simplified inner construction minimises the effort required for routine checks, saving costs.

Working when and how it should. Medela's Swiss ingenuity has led to the long lifetime for which our pumps are renowned. Company know-how, durable materials, and an intelligent configuration all contribute to the reliability of the Basic suction pump.

Addressing hygienic concerns. Hygiene concerns influenced both the design and functionality of the Basic suction pump and its optional accessories. Medela paid close attention to the location and design of operating elements in order to reduce potential contamination risks.

Reliability – Made in Switzerland

Medela's 50+ years of experience in medical vacuum led us to refine the drive unit in the Basic suction pump. The cylinders' heat-resistant high-tech material supports long-lasting, dependable operation. A flat spring with patented technology is just one of the many features integrated into this pump.

High-quality, durable components

Hygiene factors

The smooth, single-piece hood design of the pump facilitates cleaning. Materials able to withstand potent disinfection agents were chosen. The CleanTouch on/off button on the housing allows you to switch the pump on and off with a simple touch: no gaps, no grooves. The foot on/off switch integrated into the trolley leaves hands free for surgery.

Hygienic single-piece hood design

Sophisticated simplicity

The Medela Basic suction pump is hygienic, reliable and easy to use. Its membrane vacuum regulator builds up the vacuum within seconds, making the Basic suction pump suitable for applications that demand rapid suction and quiet operation. The pump is available in rack, portable and mobile models for convenient placement in endoscopy towers, at the patient's bedside or in the operating theatre. Complete the unit with the Disposable or the Reusable Fluid Collection System from Medela's wide range of accessories.

All operating elements located in front of pump

Benefits

- Basic is a reliable, hygienic and user-friendly suction pump.
- Our Swiss development and manufacturing process yields mechanical precision to provide excellent performance.
- Simple construction and easy to access internal parts minimize efforts during routine checks.
- Reliability through technology adapted to modern needs, durable materials, reduced amount of wear and tear parts.
- A wide range of accessories offers a complete system adaptable to your individual needs.
- 5 years warranty.

Delivering excellence for over 50 years with
comprehensive, high quality Swiss medical vacuum systems.

Accessories

Disposable Collection System

Disposable suction liners and reusable PC jars offer a hygienic, simple handling and efficient fluid management. Sizes: 1.5 and 2.5 litres.

Range of tubing

Made from silicone or PVC.

Reusable Collection System

Autoclavable PSU jars and lids collect secretions easily and economically. Sizes: 1, 2, 3 and 5 litres.

Foot vacuum regulator for hands-free vacuum regulation

Can be attached to standard Medela suction jars.

Range of filters

To protect the pump from overflow, to protect the environment from bacteria or to neutralise odour.

On/off foot switch

Cable length of 3.5 m.

Complement your Basic pump with Medela accessories for flexibility as well as ease of use.
