

Dräger Pack2Go® Consumables and Accessories

The future of accessories: With Pack2Go® Dräger now provides a combination of different accessories and consumables as a one-stop, one-step solution for use with Dräger ventilation and anaesthesia devices.

Benefits

Pack2Go

Dräger has developed and offers an extensive portfolio of disposable accessories for use in ventilation and anaesthesia.

With Pack2Go hospitals can now simply order all relevant disposable accessories in one package. This concept supports the hospitals' logistics and clinical processes as well as their cost structures:

- All required products (e. g. necessary accessories for your Evita ventilator) are supplied by Dräger, one-stop.
- Changing e. g. the ventilator from one patient to the next will be available in one-step, without sterilization delays or time-consuming assembling activities.
- Using Pack2Go solutions with their disposable components supports hospitals in preventing cross-contamination, assuring that only clinically clean products will be used by caregivers.¹⁾
- All products are tested for compatibility with the relevant Dräger devices and manufactured to meet the highest standards in medical technology and to ensure patient safety.

¹⁾ In intensive care units worldwide, nosocomial infections pose a serious health challenge to patients and caregivers, complicating recovery, prolonging hospital stay and raising medical costs. Ventilator associated pneumonia is the most common type of nosocomial infections in ICUs in the U.S. and Europe. Preventive procedures include the avoidance of crosscontamination as well as the maintenance and care of the artificial airway.
